From Head to Hand Dec 14 2019 In this concise and pithy study, art critic David Levi Strauss makes an argument for the continued relevance of art made by hand. A wide variety of media and individual examples are considered: the works of individual sculptors and painters; "exotic" practitioners, such as the West coast Haida and the poet Cecilia Vicuna; curatorial figures and critical thinkers; and more. Strauss uses his analysis of individual works to lay bare the real distinctions that exist between seemingly contradictory concepts like labor and poetics, thought and action. He builds up an argument that reveals the powerful relation that exists between art-making and the present cultural and political ethos. Throughout, his larger claims are elaborated through a keen attention to the interplay between fact, response, perception, and thought--dynamics which are traced out with a remarkable philosophical rigor that is engaging and, above all, provocative.

Naturopathic Physical Medicine Jul 13 2022 NATUROPATHIC PHYSICAL MEDICINE provides a philosophical naturopathic perspective, as well as practical clinical applications, for manual and physical approaches to health care. A wide range of bodywork and movement approaches and modalities are evaluated in relation to their ability to be appropriately used in naturopathic treatment and rehabilitation settings. The model of care emphasised in this text recognizes that naturopathically oriented therapeutic interventions usually focus on achieving one or all of the following: enhancement of function so that the person, system or part, can better self-regulate in response to adaptive demands; modification or removal of adaptive load factors; and symptomatic relief without creation of significant additional adaptive changes.

Fascial Dysfunction Feb 20 2023 Fascial dysfunction is now recognised as one of the main underlying causes of musculoskeletal pain leading to impaired and reduced mobility. These are the symptoms which confront all practitioners of manual therapy in their everyday practice. In this second edition of his very successful book, Leon Chaitow brings together contributions from 20 leading practitioners and researchers from many different fields of manual therapy. Fascial Dysfunction - Manual Therapy Approaches, Second Edition aims to help those practitioners to assess more precisely the dysfunction of their clients and its cause and to increase practitioner awareness of the various techniques which may help them in their attempts to alleviate their clients' problems. New features of the Second edition include: Descriptions of new research evidence and its implications for practice: The dependence of collagen health on a mixture of balanced internal and external tension The importance of adequate hydration The possible role of the telocyte The importance of 'dosage' of therapies in management of fascial dysfunction New chapters on: Gua Sha and cupping Global postural re-education Scar remodelling The book is in two sections. Section I, written by Chaitow with a contribution by Tom Myers, presents a review of the current understanding of the function of fascia in the human body and describes what can go wrong - the causes and effects of fascial dysfunction and disease, and how to assess the problem and remove obstacles to the success of treatment. Section II contains chapters by experts in different types of manual therapy including three by Chaitow. Each practitioner describes their own approach to the problem of assessing and treating fascial dysfunction and explains their specialist therapeutic approach. These approaches include: Bowen Therapy Connective Tissue Manipulation and Skin Rolling Fascia oriented training applications in sports and movement therapy The Fascial Manipulation® method applied to low back pain Fascial Unwinding Balanced Ligamentous Tension Technique Gua sha (press-stroking) and Ba guan (cupping): traditional East Asian instrument- assisted manual therapies Muscle Energy Techniques (MET) Myofascial Induction Therapy (MIT®) Neuromuscular Technique and associated Soft Tissue Manipulation Modalities Positional Release Techniques - (including counterstrain) Global Postural Re-education: Souchard Method Rolfing® Structural Integration Management of Scars and Adhesions Manual Matrix Remodeling in myofascial injuries: scar modeling technique Massage Therapy and Fascia Trigger Point release methods including dry needling

Fascia: The Tensional Network of the Human Body - E-Book Dec 06 2021 This book is the product of an important collaboration between clinicians of the manual therapies and scientists in several disciplines that grew out of the three recent International Fascia Research Congresses (Boston, Amsterdam, and Vancouver). The book editors, Thomas Findley MD PhD, Robert Schleip PhD, Peter Huijing PhD and Leon Chaitow DO, were major organizers of these congresses and used their extensive experience to select chapters and contributors for this book. Leon Abbett's New Jersey Mar 09 2022 Following in the succession of his 25 predecessors, Leon Abbett twice served as governor of New Jersey in the late 19th century. A lifelong Democrat, he was a dynamic and visionary party leader who guided the citizens of New Jersey into a new urban industrial age. While he was a machine politician and party boss, he was also a notable reformer. That was a formidable combination for his time. Grappling with a series of hot political issues and braving the passions and divisions spawned by the Civil War, Abbett was one of the ablest and most intriguing men ever to be governor. Several new ideas were transformed into public policy during his tenure. Both in style and strategy, Abbett represented a sharp break from his predecessors. He was a prime example of a governor who both in crisis and in ordinary times broadened gubernatorial authority. He became both a policy and party leader. In this context, he was an important forerunner to a type of governor that had not yet appeared on the American political stage.

Fuzzy Controllers Handbook Dec 26 2020 This book teaches you how to design a fuzzy controller and shares the author's experience of design and applications. It is the perfect book for you if you want to know something about fuzzy control and fuzzy controllers, but you are not a mathematician, so what you are really interested in is the design process. As an introduction it assumes no preliminary knowledge of fuzzy theory and technology, but starts at the root of a problem and works from there. TIf you have some experience in fuzzy controller design but are not sure how to choose the number of membership functions, how to shape them properly, or how to debug a fuzzy controller; if you are a beginner with fuzzy logic, and so you would like to know how to apply the theory; if you are researching fuzzy logic or if you need some help with a project at work - this book is for you! The text is designed for use both as a course companion for both teachers and students or for self-study. Leon Reznik has worked on fuzzy logic applications in a huge range of control situations including spacecraft launch control, microprocessor control, and metallurgical furnace control. Palpation and Assessment in Manual Therapy Sep 03 2021 As the title suggests, this book has been written to assist manual therapists to understand and hone the palpatory skills which are essential to their effectiveness as practitioners. Skilful palpation is the foundation stone of all effective manual therapy assessments and treatments. The ability to use subtle and sensitive touch to examine and assess patients is essential for an accurate interpretation of the underlying problems of fascial and muscle function. The accurate interpretation of palpatory findings is difficult and comes with experience. This book aims to increase awareness of how to palpate and understanding of what is being felt. In this fourth edition of his now well-established and much loved book Leon Chaitow has introduced references to the latest research findings relating to fascia and its role in health and disease, so that practitioners can apply this knowledge in interpreting what they palpate. In addition to the author, six notable contributors from Europe and North America enhance the work's range and authority. All manual therapists, whatever their professional background, will benefit from the wealth of experience- and research-based information presented in this book.

Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors Jan 19 2023 Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach offers a new, short term psychotherapeutic approach to working dynamically with children who suffer from irritability, oppositional defiance and disruptiveness. RFP-C enables clinicians to help by addressing and detailing how the child's externalizing behaviors have meaning which they can convey to the child. Using clinical examples throughout, Hoffman, Rice and Prout demonstrate that in many dysregulated children, RFP-C can: Achieve symptomatic improvement and developmental maturation as a result of gains in the ability to tolerate and metabolize painful emotions, by addressing the crucial underlying emotional component. Diminish the child's use of aggression as the main coping device by allowing painful emotions to be mastered more effectively. Help to systematically address avoidance mechanisms, talking to the child about how their disruptive behavior helps them avoid painful emotions. Facilitate development of an awareness that painful emotions do not have to be so vigorously warded off, allowing the child to reach this implicit awareness within the relationship with the clinician, which can then be expanded to life situations at home and at school. This handbook is the first to provide a manualized, short-term dynamic approach to the externalizing behaviors of childhood, offering organizing framework and detailed descriptions of the processes involved in RFP-C. Supplying clinicians with a systematic individual psychotherapy as an alternative or complement to PMT, CBT and psychotropic medication, it also shifts focus away from simply helping parents manage their children's misbehaviors. Significantly, the approach shows that clinical work with these children is compatible with understanding the children's brain functioning, and posits that contemporary affect-oriented conceptualizations of defense mechanisms are theoretically similar to the neuroscience construct of implicit emotion regulation, promoting an interface between psychodynamics and contemporary academic psychiatry and psychology. Manual of Regulation-Focused Psychotherapy for Children (RFP-C) with Externalizing Behaviors: A Psychodynamic Approach is a comprehensive tool capable of application at all levels of professional training, offering a new approach for psychoanalysts, child and adolescent counselors, psychotherapists and mental health clinicians in fields including social work, psychology and psychiatry.
