For the Vampire community, the Solstice Choosing has been the holiest night of the year - for a hundred thousand years. But this year, something new is about to happen. The oldest prophecies are about to be fulfilled - and the Festival of Blessings is finally upon us. Althusser and Law is the first book specifically dedicated to the place of law in Louis Althusser's philosophy. The growing importance of Althusser's philosophy in contemporary debates on the left has - for practical and political, as well theoretical reasons - made a sustained consideration of his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to the ongoing hegemony of Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to Althusser and Law argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life. The Russian playwright and novelist Mikhail Bulgakov (1891 - 1940) is now widely acknowledged as one of the giants of twentieth-century Soviet literature, ranking with such luminaries as Pasternak and Solzhenitsyn. In his own lifetime, however, a casualty of Stalinist repression, he was scarcely published at all, and his plays reached the stage only with huge difficulty. His greatest masterpiece, The Master and Margarita, a novel written in the 1930s in complete secrecy, largely at night, did not appear in print until more than a quarter of a century after his death. It has since become a worldwide bestseller. In Manuscripts Don't Burn, J.A.E. Curtis has collated the fruits of eleven years of research to produce a fascinating chronicle of Bulgakov's life, using a mass of exciting new material - much of which has never been published before. In particular, she is the only Westerner to have been granted access to either Bulgakov's or his wife Yelena Sergeyevna's diaries, which record in vivid detail the nightmarish precariousness of life during the Stalinist purges. J.A.E Curtis combines these diaries with extracts from letters to and from Bulgakov and with her own illuminating commentary to create a lively and highly readable account. Her vast collection of Bulgakov's correspondence is unparalleled even in the

USSR, and she draws on it judiciously to include letters addressed directly to Stalin, in which Bulgakov's pleads to be allowed to emigrate; letters to his sisters and to his brother in Paris whom he did not see for twenty years; intimate notes to his second and third wives; and letters to and from well-known writers such as Gorky and Zamyatin. Manuscripts Don't Burn provides a forceful and compelling insight into the pressures of day-to-day existence for a man fighting persecution in order to make a career as a writer in Stalinist Russia. Or sensual departure? Pornograph is a collection of poetry and prose poems that grabs at the physical alienation that occurs between the act of naming and the physical body. It poetically investigates the technologizing of the North American body, of the body at rest, of the body in palpable motion. This book rubs up against the categories, shuffles the cue cards, slides the body between nouns and adjectives, between verbs and exclamation marks. What defines, surrounds and controls the body? Fashion, medical language, advertising lingo, the language of sexuality? Perhaps. Or perhaps the body breaks loose from the sentence and from the page—from the text itself—inviting the reader to come play, to misbehave, to forget the self, to transform the language itself. Knowledge Cities are cities that possess an economy driven by high value-added exports created through research, technology, and brainpower. In other words, these are cities in which both the private and the public sectors value knowledge, nurture knowledge, spend money on supporting knowledge dissemination and discovery (ie learning and innovation) and harness knowledge to create products and services that add value and create wealth. Currently there are 65 urban development programs worldwide formally designated as “knowledge cities.” Knowledge-based cities fall under a new area of academic research entitled Knowledge-Based Development, which brings together research in urban development and urban studies and planning with knowledge management and intellectual capital. In this book, Francisco Javier Carillo of the Monterrey Institute of Technology (ITESM) brings together a group of distinguished scholars to outline the theory, development, and realities of knowledge cities. Based on knowledge-based development, the book shows how knowledge can be and is placed at the center of city planning and economic development to enable knowledge flows and innovation to provide a sustainable environment for high value-added products and services.
