Seeking Answers Nov 07 2021 This is a collection of abstracted thoughts of the author over the years with a variety of contents: theories, hypothesis, science fiction, remarks, comments, talks --- with topics ranging in natural science and social science. It is more philosophic than scientific. It aims on the purpose of describing an outline for a modern and rational world view. It focuses on principles. Let your mind free, but guide it by principles. That is an efficient way of thinking. A world view serves as a framework for one's knowledge and directs one's ideology. It is not a specific knowledge or skill you can make a living out of, but without a rational world view one cannot say he leads a quality life. This book can be used as a reference book for the questions you encounter in life. It arms your mind with problem solving ability.

Linear Algebra Done Right Nov 14 2019 This text for a second course in linear algebra, aimed at math majors and graduates, adopts a novel approach by banishing determinants to the end of the book and focusing on understanding the structure of linear operators on vector spaces. The author has taken unusual care to motivate concepts and to simplify proofs. For example, the book presents - without having defined determinants - a clean proof that every linear operator on a finite-dimensional complex vector space has an eigenvalue. The book starts by discussing vector spaces, linear independence, span, basics, and dimension. Students are introduced to inner-product spaces in the first half of the book and shortly thereafter to the finite- dimensional spectral theorem. A variety of interesting exercises in each chapter helps students understand and manipulate the objects of linear algebra. This second edition features new chapters on diagonal matrices, on linear functionals and adjoints, and on the spectral theorem; some sections, such as those on self-adjoint and normal operators, have been entirely rewritten; and hundreds of minor improvements have been made throughout the text.
