Math Mammoth Grade 5 Skills Review Workbook has been designed to complement the lessons in Math Mammoth Grade 5 complete curriculum, providing spiral review of the concepts in the curriculum. Math Mammoth Grade 2 Review

Workbook is intended to give students a thorough review of second grade math, following the main areas of Common Core Standards for grade 2 mathematics. The book has both topical as well as mixed (spiral) review worksheets, and includes both topical tests and a comprehensive end-of-the-year test. The tests can also be used as review worksheets, instead of tests. You can use this workbook for various purposes: for summer math practice, to keep the child from forgetting math skills during other break times, to prepare students who are going into third grade, or to give second grade students extra practice during the school year. The topics reviewed in this workbook are: - addition and subtraction without regrouping - even and odd numbers, and doubling - telling time to the five minutes - addition and subtraction facts within 0-18 - regrouping in addition and subtraction - geometry topics - fractions - three-digit numbers - measuring - money - beginning multiplication In addition to the topical review worksheets and tests, the workbook also contains many cumulative (spiral) review pages. The content for these is taken from Math Mammoth Grade 2 Complete Curriculum, so naturally this workbook works especially well to prepare students for grade 3 in Math Mammoth. However, the content follows a typical study for grade 2, so this workbook can be used no matter which math curriculum you follow. Please note this book does not contain lessons or instruction for the topics. It is not intended for initial teaching. It also will not work if the student needs to completely re-study these topics (the student has not learned the topics at all). For that purpose, please consider Math Mammoth Grade 2 Complete Curriculum, which has all the necessary instruction and lessons. Contents: A workbook containing 30 days of basic review exercises in preparation for college mathematics. Each daily section contains a short exercise set covering basic skills necessary to perform well in an introductory college math course. Focus has been placed on those skills which are difficult to retain without continued practice. The exercise collection in Part I is designed for skill enhancement in mathematics skills such as factoring, solving equations, understanding and using function notation, working with exponents and radicals, etc. Rather than being all-inclusive, the work strives to provide continued practice in the most fundamental skills necessary for successful college work. Daily work notes are provided in Part II that speak directly to the pertinent aspects of each day's exercise set. Brief and to the point, with examples when needed for clarity, these work notes add an extra dimension to help students stay on track and progress through the exercise sets. Part III contains a complete answer set. College students and their parents frequently discover that lack of college mathematical readiness requires an extra semester or even a year of college in order to earn a desired degree. A trend at colleges to attempt to remedy this situation is to offer on-campus "summer bridge" or "math boot camp" programs for entering students to alleviate this shortcoming. While effective, these programs are time-consuming and prohibitively costly for many students. In a similarly-designed approach, this workbook provides a cost-effective, self-study method to help students to stay current in mathematics and be prepared to "hit the ground running" when entering college. It is a

worthy approach to help you or your child realize a successful start to a college career.
