This textbook presents a survey of physical anthropology, the branch of anthropology that studies the physical development of the human species. It plays an important part in the study of human origins and in the analysis and identification of human remains for legal purposes. It draws upon human body measurements, human genetics, and the study of human bones and includes the study of human brain evolution, and of culture as neurological adaptation to environment. The authors use the progressive term "biological anthropology" to mean "an integrative combination of information from the fossil record and the human skeleton, genetics of individuals and of populations, our primate relatives, human adaptation, and human behavior

The Arch Lake human burial site, discovered in 1967 in eastern New Mexico, contains the third-oldest known remains in North America. Since its original excavation and removal to Eastern New Mexico University's Blackwater Draw Museum, the 10,000 radiocarbon-year-old burial has been known only locally. In February 2000 an interdisciplinary team led by Douglas W. Owsley reexamined the osteology, geology, archaeology, and radiocarbon dating of the burial. In this first volume in *Peopling of the Americas Publications*—released by Texas A&M University Press for the Center for the Study of the First Americans—*Arch Lake Woman* presents the results of this recent analysis of the skeleton and site. In addition to color and black-and-white illustrations, *Arch Lake Woman* includes extensive tables describing the team's discoveries and comparing their results with those of other ancient burials.

Physical anthropologists, like other research workers, are recognizing that the standard multivariate statistical techniques of recent decades are in need of refinement and greater precision. Increasingly it is felt that more sophisticated methods are called for, specifically designed for the materials and problems at issue. To this end the editors were

asked by organizers of the First Intercongress of the International Union of Anthropological and Ethnological Sciences to develop a symposium on this general subject. With the title of this book, the symposium was held in Amsterdam on April 23-25, 1981. Invited were mathematical statisticians who were known to have an acquaintance with and interest in anthropological problems, together with anthropologists and human geneticists who consider multivariate methodology essential for their research. This volume constitutes an updated and revised selection from among the papers presented, together with a few supplementary papers by authors who were not present but whose work fills out the intended coverage and makes the volume more complete with respect to the state of affairs in the field. The papers are devoted both to new methodology and to its practical application. Mathematical statisticians may wish to know more about the biological nature and the kinds of materials and samples on which mathematical thinking can be exercised. Anthropologists as practitioners may not be fully aware of the possibilities and limitations in particular mathematical models and methods. Our purpose has been to bring the two groups together, for personal discussions across disciplinary lines as well as within disciplines. This book is part of an encyclopedia set concerning the environment, archaeology, ethnology, social anthropology, ethnohistory, linguistics and physical anthropology of the native peoples of Mexico and Central America. Volume 13 presents a look at pre-Columbian Mesoamerican from a combined historical and anthropological viewpoint, using official ecclesiastical and government records from the time. In the wake of World War II, anatomist and anthropologist Mildred Trotter left the Midwest for a temporary post as the forensic anthropology expert for the Army in the Territory of Hawaii. Her formidable task was to identify the remains of war dead in order to return them to their families, in a national effort that continues to this day. Mildred Trotter and the Invisible Histories of Physical and Forensic Anthropology is the first, long overdue biography on this woman of immense stature in her field. She was the first woman to serve as President of the American Association of Physical Anthropologists and the first woman to be full professor at the Washington University School of Medicine in St. Louis. While primarily a biography of Trotter, this book also examines aspects that are so often left out of retrospectives of science and scientific figures. This includes scientific error, the historical experiences of the few women and individuals from other marginalized groups active in the discipline, sexism, and scientific and social racism. This book also provides novel historical context regarding her major and now well-known tibia mismeasurement. Mildred Trotter and the Invisible Histories of Physical and Forensic Anthropology is a must-read for anyone interested in the history of science and women in science, and for all practicing and aspiring biological and forensic anthropologists. The book provides expert information about physical anthropology and its application in the study and research of the biological variability of humans and human populations in time and space. The book is written for students of healthcare disciplines, for students of medicine, for students of teaching degrees in human biology and kinanthropometry, and for postgraduate students and professionals (doctors, coaches, nutrition advisors, etc.). The book is divided into eight chapters. The first chapter introduces physical anthropology, explaining its position and goals in the system of anthropological disciplines. This is followed by a chapter presenting the standardized methods of anthropometry and a chapter describing the organization of anthropological research and presenting a historical overview of major anthropological surveys. The subsequent

chapters outline methods designed to evaluate body composition and human constitution and methods assessing the physical growth and development of children. The last chapter but one details methods serving to assess the physical parameters of an individual or group compared to the standard using the Z-score. The final chapter sets out the anthropometric instruments used in physical anthropology and describes their technical parameters. This reference dictionary takes a new approach to the study of physical anthropology by focusing on the concepts involved. Stevenson presents concise entries describing the development of physical anthropological concepts followed by bibliographies including most of the major works in the field. The history of the usage of each concept is traced from its origins--often outside the discipline of physical anthropology--to the contemporary and usually multidisciplinary contexts in which physical anthropologists participate. Entries clearly delineate both the theoretical development of the concepts under discussion and their applications in physical anthropological practice.
