20-1132 CLS Review Made Incredibly Easy!® gives you the confidence you need to pass the ACLS certification exam as well as the knowledge and skills needed to perform advanced cardiac life support. Packed with easy-to-remember definitions and step-by-step directions on the latest treatment algorithms, this enjoyable review text tackles required ACLS course and exam content. It is also the perfect on-the-spot clinical reference—for nurses, students, and all healthcare professionals. Be expertly guided through the latest ACLS training and exam preparation with: NEW and updated content in quick-read, bulleted format, based on current American Heart Association guidelines NEW and updated cardiovascular pharmacology content NEW and updated interventions Explains ACLS course and exam components and requirements Proven study strategies, end-of-chapter quick quizzes, and an end-of-book practice test Explanations of complex concepts—easy-to-retain guidance on how to recognize and treat cardiac arrhythmias, including: Classifications of interventions, including basic life support skills, adult cardiac arrest algorithm, and defibrillation Step-by-step how-tos for current treatment algorithms Managing specific rhythms—hypovolemia, hypoxia, acidosis, hypothermia, cardiac tamponade, tension pneumothorax, pulmonary coronary thrombosis, and more Dozens of colorful diagrams and illustrations outline the core concepts and skills needed for ACLS certification, including: CPR - when and how to use it Devices and procedures skills - safe ventilation techniques, including endotracheal intubation and supraglottic devices, as well as defibrillators, pacemakers, and more Early management - managing the first 30 minutes of cardiac emergencies Emergency conditions - which cardiac rhythms may require ACLS treatment IV and invasive techniques - such as peripheral and central IV line insertion Pharmacology - knowing the action, indication, dosages, and precautions for the major drugs used during ACLS Special features that include: Just the facts - quick summary of each chapter's content o "Nurse Joy" and "Nurse Jake" - expert insights on interventions and problem-solving Quick quiz - multiple-choice questions after each chapter to help you retain knowledge o Now I get it! - real-life patient scenarios illustrating correct ACLS interventions o What to look for - tips on identifying and interpreting arrhythmias. About the Clinical Editor Kate Stout, RN, MSN, is a Critical Care Charge RN at Southern Hills Hospital in Las Vegas, Nevada. In an era of transition from classic Cardiopulmonary resuscitation (CPR) to assisted device-CPR or hemodynamic driven CPR, this book, published by InTechOpen, highlights some interesting aspects of resuscitation. Divided in three sections, the research presented emphasizes the details of resuscitation in special circumstances to possible future applications in the field. The authors offer us not only a vigorous review of the current

literature but also a research road map for further advancement. 20-2811 20-1101 People with diabetes want heart-healthy recipes, since heart disease strikes people with diabetes twice as often as the rest of the population. But they also want recipes that taste great. In *Diabetes & Heart Healthy Meals for Two*, the two largest health associations in America team up to provide recipes that are simple, flavorful, and perfect for people with diabetes who are worried about improving or maintaining their cardiovascular health. A follow-up to *Diabetes & Heart Healthy Cookbook*, this collaboration from the American Diabetes Association® and the American Heart Association focuses on meals with only two servings. Because so many adults with diabetes are older, two-serving meals are perfect for those without children in the house—or even those living alone who want to keep leftovers to a minimum. Introduction -- Understanding the public health burden of cardiac arrest: the need for national surveillance -- The public experience with cardiac arrest -- Emergency medical services response to cardiac arrest -- In-hospital cardiac arrest and post-arrest care -- Resuscitation research and continuous quality improvement -- Recommendations and key opportunities -- Acronyms -- Meeting agendas -- Committee biographies -- Selected results from commissioned analyses -- Map of U.S. States with CPR training as a high school graduation requirement -- Utstein guideline -- endorsed data elements for reporting out-of-hospital cardiac arrest. 20-2804 The Neonatal Resuscitation Program (NRP) is an educational program jointly sponsored by the American Academy of Pediatrics (AAP) and the American Heart Association (AHA). This updated edition reflects the 2015 AAP/AHA Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care of the Neonate. Full color. Product 15-2100JP Product 15-1064 Product 15-2849 Product 90-1074 Instructor CD contents include: Precourse materials -- Course materials -- Evaluation materials -- Resources. Pediatric Resuscitation is reviewed in this issue of *Pediatric Clinics of North America*, guest edited by Drs. Steve Schexnayder and Arno Zaritsky. Authorities in the field have come together to pen articles on Background and Epidemiology; CPR - Why the New Emphasis?; Airway Management; Arrhythmias, Cardioversion, and Defibrillation; Vascular Access and Medications; Medical Emergency Teams; Teamwork in Resuscitation; Resuscitation Education; Outcome Following Cardiac Arrest; Extracorporeal Life Support during CPR; Post-resuscitation Care; and Future Directions. 20-1100 Sudden cardiac arrest is the leading cause of death among adults, yet it need not be fatal. Though survival in most communities is very poor, a few communities achieve rates as high as 50%. Why are some communities so successful in snatching life from the jaws of death? *Resuscitate!* describes the steps any EMS system can take to improve cardiac arrest survival. It is written for the medical directors, administrative directors, fire chiefs, dispatch directors, and program supervisor who direct and run EMS systems all across the country, and for the EMTs, paramedics, and dispatchers who provide frontline care. This second edition of *Resuscitate!* provides fifteen concrete steps to improve survival. Four steps will lead to rapid improvements at the local level and are relatively easy to implement. Six additional steps are more difficult to implement but also likely to improve survival. The remaining steps recommend changes at the national level. *Resuscitate!* is the official textbook for the Resuscitation Academy, held twice a year in Seattle. Cosponsored by Seattle Medic One, King County EMS, and the Medic One Foundation, the Academy draws attendees from throughout the world for two intensive days of classes, demonstrations, and workshops to acquire the knowledge and tools to improve survival in their own communities. This new edition includes lessons learned from attendees of the Academy as well as from the faculty's evolving thoughts on how to measure performance and improve survival, one community at a time. It also includes an addendum on the Resuscitation Academy (resuscitationacademy.org). For more than thirty years, Mickey S. Eisenberg M.D., Ph.D. , has played a leading role in developing King County, Washington's emergency response to cases of sudden cardiac arrest, a system recognized as among the very best in the nation. He is a professor of medicine at the University of Washington and serves as the medical director of King County Emergency Medical Services. The content in this handbook is in compliance with the latest 2020 guidelines recently released by the American Heart Association (AHA). All the protocols illustrated here are based on up-to-date evidence. These guidelines are updated every 5 years. This handbook is designed for all medical professionals who undergo ACLS training. It aims to establish a sound understanding of the principles of ACLS, and the latest guidelines. 20-1110 20-1120 Literature Review from the year 2017 in the subject Medicine - Hospital Environment, Clinical Medicine, grade: 1, Egerton University, language: English, abstract: Over the years, the American Heart Association has made

outstanding contributions and numerous improvements to cardiopulmonary resuscitation and advanced cardiac life support guidelines. It is due to adequate use of resources and continuous research that millions of lives are saved in the United States. Such guidelines serve health care providers and other members of the healthcare team as a resource to ensure adequate and timely response to those individuals who experience cardiac or respiratory arrest. However, according to AHA statistics, "More than 326,000 people in the US suffer out-of-hospital cardiac arrests each year. Statistics prove that if more people knew CPR, more lives could be saved" (American Heart Association, 2016). In other words, dissemination of knowledge on the matter has direct outcomes on increasing survival rates. Therefore, the guidelines and the implementation methods are on continuous review based on new evidence. It is important to provide those who suffer cardiac or respiratory arrest with timely services because delays could end up affecting the outcome of those who experience reversible damage. Healthcare providers around the world have become informed on the benefits of updated competence and direct patient outcomes and quality of care. The American Heart Association has published the new 2015 cardiopulmonary resuscitation guidelines, where changes and updates are reflected in an effort to put the best available evidence in practice. The purpose of this review is to compare the 2015 AHA updates with historical evidence in an attempt to explicate the implications and limitations of pharmacology in advanced cardiac life support. Demonstrates CPR procedures for use in group training. An in-depth review by leading authorities of the latest therapies and techniques for rescuing persons in cardiac arrest. The authors explore the physiology behind current state-of-the-art clinical resuscitation and translate it into practical bedside recommendations, clinical tips, and expert techniques. Topics of interest include the epidemiology of sudden death, management of ventilation, chest compression technique training, public access defibrillation, drug delivery during CPR, the latest drug therapies, and cardiac arrest in disease, pregnancy, drowning, lightning strike, and trauma. The authors also review the major ongoing research in resuscitation science that will likely affect the next set of international resuscitation guidelines. Product 15-1016 The clinical practice of anesthesia has undergone many advances in the past few years, making this the perfect time for a new state-of-the-art anesthesia textbook for practitioners and trainees. The goal of this book is to provide a modern, clinically focused textbook giving rapid access to comprehensive, succinct knowledge from experts in the field. All clinical topics of relevance to anesthesiology are organized into 29 sections consisting of more than 180 chapters. The print version contains 166 chapters that cover all of the essential clinical topics, while an additional 17 chapters on subjects of interest to the more advanced practitioner can be freely accessed at www.cambridge.org/vacanti. Newer techniques such as ultrasound nerve blocks, robotic surgery and transesophageal echocardiography are included, and numerous illustrations and tables assist the reader in rapidly assimilating key information. This authoritative text is edited by distinguished Harvard Medical School faculty, with contributors from many of the leading academic anesthesiology departments in the United States and an introduction from Dr S. R. Mallampati. This book is your essential companion when preparing for board review and recertification exams and in your daily clinical practice. When a life is at stake, you will want to do everything you can to ensure that person makes it out alive. When CPR is needed, it is crucial to administer the procedure properly. This is where CPR Lifesaving reference guides come into play. These handy guides will let an individual know the steps needed to complete CPR. These guides help save lives in emergencies for people who haven't taken a full CPR course at their local Red Cross Station. 20-1107 Product 15-3105 Geared to LPNs/LVNs, this quick-reference pocket book provides an easy-to-understand guide to ECG interpretation and features over 200 clearly explained ECG rhythm strips. Following a refresher on relevant cardiac anatomy, physiology, and electrophysiology, the book presents the 8-step method for reading any rhythm strip. Subsequent chapters explain various cardiac rate and rhythm abnormalities, including sinus node arrhythmias, atrial arrhythmias, junctional arrhythmias, ventricular arrhythmias, and atrioventricular blocks. Arrhythmias are covered in a consistent format—causes, significance, ECG characteristics, signs and symptoms, and interventions. Coverage also includes ECG characteristics of disorders, drugs, pacemakers, and implantable cardioverter-defibrillators and a chapter on basic 12-lead electrocardiography. 20-1115 Cardiac Arrest is the definitive and most comprehensive reference in advanced life support and resuscitation medicine. This new edition brings the reader completely up-to-date with developments in the field, focusing on practical issues of decision

making, clinical management and prevention, as well as providing clear explanations of the science informing the practice. The coverage includes information on the latest pharmacotherapeutic options, the latest chest compression techniques and airway management protocols, all backed by clearly explained, evidence-based scientific research. The content is consistent with the latest guidelines for practice in this area, as detailed by the major international governing organisations. This volume is essential reading for all those working in the hospital environments of emergency medicine, critical care, cardiology and anesthesia, as well as those providing care in the pre-hospital setting, including paramedics and other staff from the emergency services.
